

Cord Caddy™

Monitor Cord Organizer

Improve:
Patient Safety
Nursing Efficiency
Infection Prevention
Accident Avoidance
Room Readiness

Cord Caddies directly impact patient, staff, and visitor safety in hospitals by:

- Minimizing fall risks associated with tripping accidents from cords not properly secured/stored
- Allowing for best practices with a dedicated place for cords to be disinfected and stored between patients
- Providing a method for safer, more efficient cord management while simultaneously uncluttering patient rooms and enhancing patient care

Every shift without Cord Caddy is an increase in risk.

Phone Cord Organizer

Cord Caddies Enhance Infection Prevention

- 1 Cords are used on multiple patients, accruing contaminants if not disinfected after each patient.
- 4 Cords neatly wrapped on the Cord Caddy provide a visual cue this process has been completed.

- 2 Nurses handle cords, often interacting with patients to change wound dressings. It is therefore imperative to adhere to a strong protocol for disinfecting.
- 3 Cord Caddy encourages best practice of cleaning, wrapping and storing cords.

- **Room appearance influences perception of care, and clutter implies uncleanness.**
- **Cord Caddies minimize exposure to costly accidents.**
- **Cord Caddies enhance room readiness.**
